

Brand guidelines.

The network is a person.

MTTA — the Metropolitan Toeesh Transit Authority — is a portfolio drawn as a transit map. Every line is a thread of toeesh's life; every station is something he made or can't stop thinking about. The brand borrows the discipline of real transit information systems: it is functional first, quiet, and every mark on the page earns its place.

The visual language runs in two registers of the same grammar. **Paper** — the printed rail map: a white field, solid ink station dots, white boards read via warm hairlines. And **Signage** — the night register: the black field of a station information screen, flat boards, cream advisories. Between them only the surface flips; every rule in this book holds on both.

Function first. Every element mimics a real piece of transit furniture — a departures board, a line map, a service advisory. If it wouldn't exist in a station, it doesn't exist here.

The field is black, the content is colour. Chrome is monochrome (black, white, grey). Colour belongs to the lines, and to the two sanctioned accents: signature yellow and signal red.

Flat, not decorated. No drop shadows, no gradients, no glows. Boards separate from the field by a header strip and a hairline, nothing else.

Lowercase voice. The system speaks quietly and in lowercase — except where signage convention demands otherwise (station names, advisories).

The origin aperture.

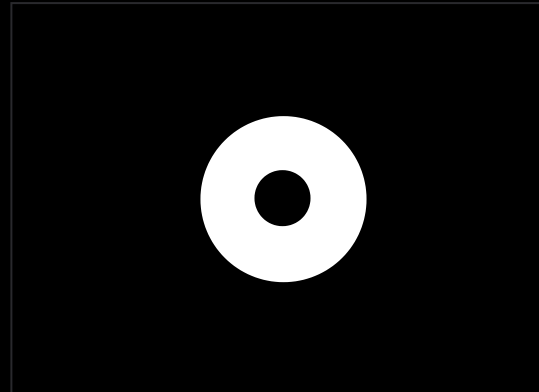

The mark is a roundel with an open centre — the **origin aperture**. It is the first station of the network ("the damn origin") and the favicon, map marker and brand mark are all the same drawing. The hole is always a true cutout of the field behind it, never a printed second colour.

Construction

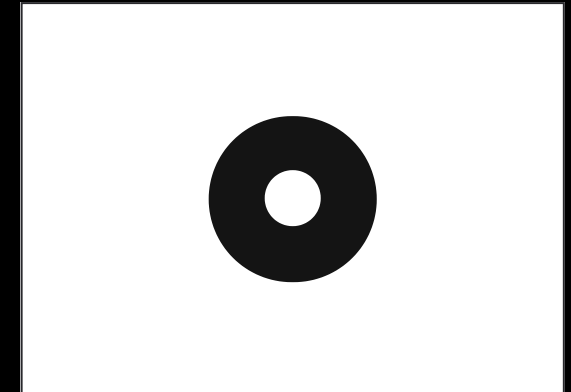

Outer circle $\varnothing = 1u$. Aperture $\varnothing = 0.3u$, dead centre. Clearspace = $0.4u$ on all sides. Minimum size 12px / 4mm.

Wordmark

Set in RM Neue at weight 800, tracking $-0.05em$: **toeesh**.network — the suffix always drops to secondary grey. Roundel sits left of the wordmark at $0.8\times$ cap height.

ON THE FIELD — WHITE ROUNDEL

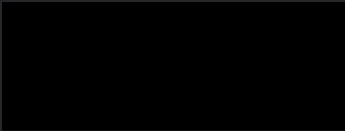

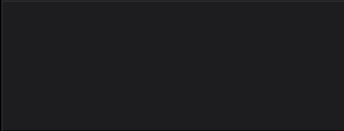

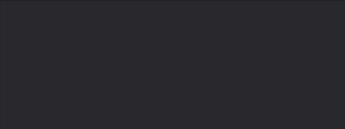

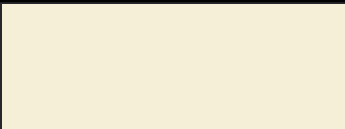

ON PAPER — INK ROUNDEL

Don't fill the aperture, rotate the mark, or add a ring/outline.

Don't recolour the roundel — it is white on the field, ink on paper. Line colours never touch it.

Do let the aperture show whatever surface it sits on: it is a hole, not a dot.

Nine colours. No more.

 The field #000000	 Board #101012	 Header strip #1D1D20
 Hairline #29292D	 Signage white #FFFFFF	 Secondary grey #98989E
 Advisory cream #F6EFD8	 Signal red #E0472F	 Signature yellow #FFD21F

The field is true black — the map canvas and page background are the same surface, so boards float on it without edges.

Board / header / hairline are the only three greys of the furniture. A board is body colour, capped by a header strip, divided by hairlines.

White is for primary content and the highlight state — a selected row inverts to a white pill with black text.

Cream means *advisory*: service notices, onboarding, decommission stamps. Always black ink on cream, led by the !-roundel.

Signal red means *closed / no service*. Used in tags and closed-station markers only — never decoratively.

Yellow is the single signature accent: live readouts, the DUE row, the primary call-to-action.

Colour belongs to the lines.

THE NETWORK · THREADS 01-07		LIVE

02	musings	#1F8A4C
03	the old flame	CLOSED
04	projects	#1565C0
05	prep	#E08A1E
06	SAT Math	#00897B
07	SAT English	#5E35B1

THE NETWORK · THREADS 08-13		LIVE
08	Physics	#3949AB
09	Chemistry	#E64A19
10	Math	#6D4C41
11	Computer Science	#00ACC1
12	Godot	#827717
13	English	#546E7A

Every thread carries a two-digit code and one of four Bauhaus bullet shapes (circle, square, triangle, semicircle). A closed thread keeps its colour at 45% and takes the **signal-red** closed tag. Line colours are content, not brand — new threads may introduce new colours, but chrome never borrows them.

Two voices: display & readout.

DISPLAY · RM NEUE
800

The MTTA Welcomes you!

STATION NAME · 800

L'Enfant Plaza · FinStocks

BODY · 400

Each thread is a part of me; each stop is something I made or
can't stop thinking about.

BOARD · JB MONO

DEPARTURES · 15:34 · LIVE

TAG · RM NEUE 600

A WAYFINDING SYSTEM · DELHI · V1

RM Neue (variable, 100–900) is the only display and body face. Headlines run at weight 800, tracking -0.04em , tight leading (0.9–0.96). Helvetica Neue is the fallback stack.

JetBrains Mono appears in exactly one place: the departures board — the one true machine surface. Every other small label, tag, code and status is RM Neue at weight 600, uppercase, tracked $+0.1\text{em}$.

Numbers are tabular in readouts. Arrival times sit right-aligned, bold white, with the unit ("min") staying small.

No italics, no underlines in signage. Emphasis is weight or the white-pill inversion.

The furniture.

■ DEPARTURES			15:34 ● LIVE
01	● CENTRAL	whats next?	DUE
01	● CENTRAL	the junction	6 min
04	■ PROJECTS	FinStocks	10 min

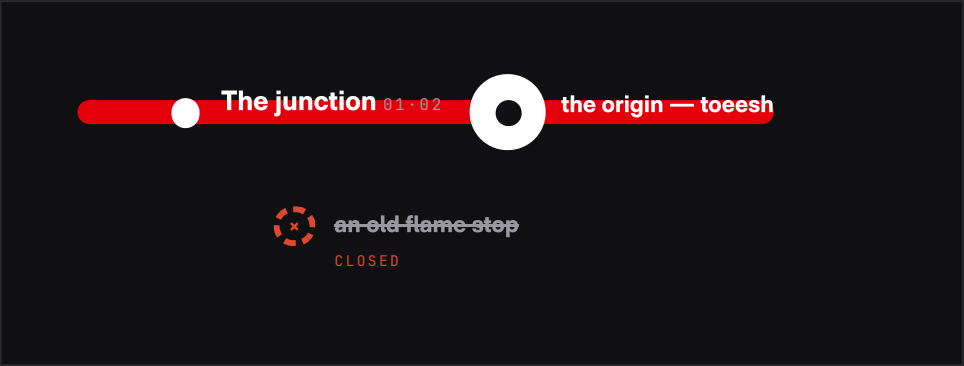

THE DEPARTURES BOARD — HEADER STRIP, HAIRLINE ROWS, YELLOW DUE

!

No old-flame service due to planned decommission.

The rest of the network is unaffected. Take it slow — ride another line.

THE SERVICE ADVISORY — CREAM, BLACK INK, !-ROUNDEL

STATIONS — SOLID DOT ON THE RIBBON · TRANSFER BULLSEYE · ORIGIN ROUNDEL · RED CLOSED MARKER

Boards: body colour, one header strip, hairline rows. Never a drop shadow, never a thick border.

Stations are solid dots sitting on the ribbon — ink on paper, white at night. Transfers are the white-disc bullseye (⊙). Names set as small bold text beside them — riding the segment's angle on diagonals — with letter-in-square feature icons (M media · ↗ links · ★ start here).

The land: a gray beltway ring frames the network; parks are pale-green commons; water is flat pale blue. Termini carry two-letter route codes (CE, MU, PR...) in their line's disc.

Selection inverts: white pill, black text. One highlight at a time.

Quiet, lowercase, in service.

Voice

Lowercase by default. "the network", "slowly living", "start here ➤". Caps are reserved for station names and mono readouts.

Transit grammar. Everything is said the way a system would say it: "GOOD SERVICE · slowly living", "DELAYED · that side project", "NOW ARRIVING · a new idea".

Warm underneath. The deadpan signage voice carries a personal note — advisories apologise, quips joke, the map says "welcome".

Motion

Motion is ambience, not decoration. Trains ride the lines, the clock blinks, boards flip like split-flaps. Nothing bounces for attention.

Every animation has an off switch. The MOTION toggle freezes the whole system; the design must read perfectly when frozen.

The night-owl mode (Konami code) is the one sanctioned break from all of this — neon, glowing, loud. It is an easter egg, not a theme.

This document is itself set in the signage system.

If a new surface can be designed by copying a page of this PDF, the system is working.
